

# PHASE EQUILIBRIA DIAGRAMS FOR CERAMIC SYSTEMS

**NIST**

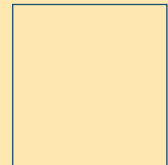

[www.ceramics.org/phase](http://www.ceramics.org/phase)

Introducing Phase Equilibria Diagrams CD-ROM Version 3.3...

The new release includes **900 new figures**, approximately **1400 new phase diagrams** and provides experimental and calculated data for an unprecedented range of non-organic material-types pertinent to a wide variety of applications. New diagrams include phosphates, halides, metal+oxide systems, chalcogenides and more!

Order a free demonstration CD-ROM featuring Version 3.3 functionality. Visit us on the web at [www.ceramics.org/phase](http://www.ceramics.org/phase) to order online or to download the order form.

The American Ceramic Society (ACerS) and the National Institute of Standards and Technology (NIST) have collaborated on publishing evaluated phase diagrams of ceramic systems specifically addressing oxides, salts, carbides, nitrides, borides, compound semiconductors and chalcogenides for more than 60 years.

"The ACerS-NIST Phase Equilibria Diagrams Database is immensely useful for both in depth development

projects as well as quick checks for material compatibility prior to high temperature furnace exposures. The system is easy to use – the product indispensable for anyone working in ceramics."

Elizabeth Opila  
NASA Glenn Research Center

## GREAT WAYS TO ACCESS THE TRUSTED CONTENT FROM ACERS/NIST:

- ▣ CD Database Version 3.3
- ▣ Online
- ▣ Books
- ▣ Topical CD-ROM

The Version 3.3 database contains more than **23,000 phase diagrams** and offers full commentary text and diagram display. The chemical systems featured on the new release include:

- Phosphates - batteries, laser and other optoelectronic materials
- Chalcogenides - semiconducting sulfides, selenides and tellurides for thermoelectrics, optoelectronics, photovoltaics
- Pnictide systems - nitrides, phosphides, arsenides, and antimonides for bandgap-engineered optical materials, electron-transport devices, sensors, detectors, photovoltaics, thermoelectrics
- Halides - nuclear applications, scintillation detectors
- Oxide and metal+oxide systems - electrode processing, catalysis, electroceramics, magneto-resistors, thermistors, capacitors, nuclear fuel and nuclear waste, ionic conductors, fuel-cell electrolytes

This searchable CD contains all the information previously printed in the 21-volume series as well as **over 2,500 electronic-only diagrams** published since 2008. Features include high-quality printing and export capabilities, multiple file formats and on-screen plotting.

**Special Offer:** If you have purchased earlier versions of Phase Equilibria Diagrams, upgrade now at a special low price. Contact ACerS Customer Service for details at +1(866) 721-3322 or +1(240) 646-7054.

"Phase diagrams are critical to materials selection and processing, but can be taken for granted until one encounters a system for which a diagram is not available. Thus, the availability and maintenance of phase diagram collections is critical for materials scientists and engineers. The commentaries in the ACerS-NIST database are important for providing the user with information on the quality of the diagram, so that they can be used appropriately, without necessarily having to consult the original reference."

Now you can access over 23,000 valuable diagrams online, anytime. It's convenient, cost effective and just as reliable for you to get the information that you need. Plus, new diagrams and updates are automatically available, making the information more dynamic. There is no need to purchase updates! This online system allows you to easily view and print diagrams and commentaries.

**Library Subscription – One Year** \$1,695 per year (Nonmember)  
\$1,595 per year (Member)

The Phase Online Library Subscription enables librarians to provide access to phase diagrams at all work stations within their institutions by designating ranges of IP addresses. Once the subscription is set up, individuals using a computer with the institution's specified IP address range are able to access the Phase Online content without entering a username or password. Order today at <http://phase.ceramics.org>

**PHASE ONLINE FLEXIBLE PRICING OPTIONS**

Products	Nonmember \$US	Member \$US

- **EASY TO NAVIGATE WEBSITE**  
Visit <http://phase.ceramics.org>. Search for the diagram you need. Log on or set up an account to access commentary and diagram features.
- **EASY SEARCHING CAPABILITY**  
Search for the diagram you need by component, volume number, element, date, author or figure number.
- **USE DIAGRAMS WITH EASE**  
The purchase process is simple and secure. Set up an account and select one of the purchase plans that fits your needs, and you can begin downloading diagrams.
- **SECURE ONLINE ORDERING**  
View diagrams and commentaries of all published ACerS-NIST Phase Diagrams. Advanced features include on screen plotting, zoom in capability, lever rule and much more.

All content from these titles are included on the Phase Equilibria Diagrams CD-ROM Version 3.3 and Phase Online.

\$149 List • \$119 ACerS Member • Order Code: PHT02 • ISBN: 1-57498-040-8

The topical CD-ROMs are valuable resources for those seeking a subset of Phase Equilibria Diagrams on the following topics:

- High-Tc Superconductors
- Zirconium and Zirconia Systems
- Electronic Ceramics
- Solid Oxide Fuel Cells
- Phase Equilibria Diagrams, Vol. XIV

**PHASE DIAGRAMS FOR ELECTRONICS CERAMICS I • 2005 • CD-ROM**

*Robert S. Roth, Editor*

This searchable CD-ROM contains the entire contents from the published book of the same title. The topical focus of this diagram collection is on systems of interest in the field of dielectric ceramics containing TiO<sub>2</sub>Nb<sub>2</sub>O<sub>5</sub>, and Ta<sub>2</sub>O<sub>5</sub>. Such systems are important in the manufacture of ceramic components for applications including capacitors, transducers, actuators, resonators, and filters. The volume contains 857 figures and approximately 1,100 diagrams.

**CD-ROM: \$249 List • \$199 ACerS Member • Order Code: PH108 • ISBN: 1-57498-241-9**

**PHASE DIAGRAMS FOR HIGH-TC SUPERCONDUCTORS • 2005 • CD-ROM**

*J.D. Whittler, T.A. Vanderah, R.S. Roth, and H.F. McMurdie, Editors*

This searchable CD-ROM contains the entire contents from the published books, Phase Diagrams for High-TC Superconductors I and II. This CD-ROM includes 836 evaluated diagrams, most of which have appeared in literature between 1991 and 1996. Diagrams pertinent to all the families of high-temperature superconductors are included.

**CD-ROM: \$249 List • \$199 ACerS Member • Order Code: PH106 • ISBN: 1-57498-239-7**

**PHASE DIAGRAMS FOR ZIRCONIUM AND ZIRCONIA SYSTEMS • 2005 • CD-ROM**

*H.F. McMurdie and H.M. Ondik, Editors*

This searchable CD-ROM contains the entire contents from the published book of the same title and contains both old and new material. This CD-ROM includes 1,060 evaluated diagrams that describe all available data for systems containing zirconium.

**CD-ROM: \$249 List • \$199 ACerS Member • Order Code: PH107 • ISBN: 1-57498-240-0**

**PHASE DIAGRAMS FOR SOLID OXIDE FUEL CELLS • 2006 • CD-ROM**

*Michael D. Hill, Editor*

Phase Diagrams for Solid Oxide Fuel Cells is a topical cross-cut through the entire Phase Equilibria Diagrams published database. This compilation of 1596 diagrams is designed to be a resource for materials scientists working in this active area of research. The diagrams were selected according to their relevance to existing solid oxide fuel cell (SOFC) systems or to systems receiving attention in the research literature.

**CD-ROM: \$249 List • \$199 ACerS Member • Order Code: PH110 • ISBN: 1-57498-285-0**

**VOLUME XIV: OXIDES • 2005 • CD-ROM • 672 PAGES**

*R.S. Roth and T.A. Vanderah, Editors*

Contains more than 1300 evaluated diagrams and more than 800 descriptive commentaries on oxide systems, primarily from literature published through 2004. This volume complements the earlier phase volumes on oxide systems.

**CD-ROM: \$249 List • \$199 ACerS Member • Order Code: PH109 • ISBN: 1-57498-256-7**
