

An essential tool for the study and development of new materials, ACerS-NIST Phase Equilibria Diagrams products provide **trustworthy information** in a convenient package that you can't find anywhere else. **Reduce research time** and **avoid costly experimentation** when you consult ACerS-NIST critically-evaluated phase diagrams for ceramic systems.

The newest release includes **900 new figures** with approximately **1400 new phase diagrams** bringing the total to over 23,000 diagrams. It also provides experimental and calculated data for an **unprecedented range of nonorganic material-types** pertinent to a wide variety of applications. New diagrams include phosphates, halides, metal+oxide systems, chalcogenides and more!

According to a recent McKinley Marketing, Inc. study, 70% agree that the "ACerS-NIST phase product is a decidedly more convenient method of finding and analyzing materials properties than a standard literature search." Almost 40% of respondents use phase diagrams at least monthly. **Save time and money with**

ACerS-NIST products.

"The ACerS-NIST Phase Equilibria Diagrams Database is immensely useful for both in depth development

projects as well as quick checks for material compatibility prior to high temperature furnace exposures. The system is easy to use – the product indispensable for anyone working in ceramics."

Elizabeth Opila, University of Virginia

Order a free Demo & Cumulative Index CD-ROM featuring 202 figures from *Annual 1992* and 11 diagrams from *Volume 15*. Visit us on the web at www.ceramics.org/phase to order online or to download the order form.

ACCESS THE TRUSTED CONTENT THROUGH:

- ➡ Online
- ➡ CD Database Version 3.3
- ➡ Books
- ➡ Topical CD-ROM

Access ACerS-NIST's **23,000** critically-evaluated diagrams from any computer with Phase Online. It's a **convenient, cost-effective** and **reliable** method to get the information that you need. Plus, new diagrams are automatically available, making the online system more dynamic. There is no need to purchase updates! This online system allows you to easily view and print diagrams and commentaries.

The **Phase Online Library Subscription** enables librarians to provide access to phase diagrams at all work stations within their institutions by designating ranges of IP addresses. Once the subscription is set up, individuals using a computer with the institution's specified IP address ranges are able to access the Phase Online content without entering a username or password. The Library Subscription is an **economical** and **valuable analytical tool** for professors and students studying and researching materials and technology.

Order today at <http://phase.ceramics.org> or contact Mark Mecklenborg (mmecklenborg@ceramics.org) for more information.

➔ **EASY TO NAVIGATE**

Visit <http://phase.ceramics.org> to search the database for free.

➔ **ADVANCED SEARCH OPTIONS**

Search diagrams by component, volume number, element, date, author or figure number.

➔ **SECURE ONLINE ORDERING**

Set up an account, select a plan that fits your needs and you can begin downloading diagrams.

➔ **USE DIAGRAMS WITH EASE**

View diagrams and commentaries of all published diagrams. Advanced features include **on-screen plotting**, **zoom lever rule** and much more.

Purchase Phase Equilibria Diagrams CD Database Version 3.3 to own more than **23,000 phase diagrams**, offering full commentary text and diagram display. The chemical systems featured on the new release include:

- **Phosphates** - batteries, laser and other optoelectronic materials
- **Chalcogenides** - semiconducting sulfides, selenides and tellurides for thermoelectrics, optoelectronics, photovoltaics
- **Pnictide systems** - nitrides, phosphides, arsenides, and antimonides for bandgap-engineered optical materials, electron-transport devices, sensors, detectors, photovoltaics, thermoelectrics
- **Halides** - nuclear applications, scintillation detectors
- **Oxide and metal + oxide systems** - electrode processing, catalysis, electroceramics, magneto-resistors, thermistors, capacitors, nuclear fuel and nuclear waste, ionic conductors, fuel-cell electrolytes

This searchable CD contains all the information previously printed in the 21-volume series as well as **over 2,500 electronic-only diagrams** published since 2008. CD-ROM features include **high-quality printing** and **export capabilities, multiple file formats** and **on-screen plotting**.

Special Update Policy: CD owners must purchase annual updates to keep their information current. Visit www.ceramics.org/phasecd for complete purchase details or contact ACerS Customer Service at +1(866) 721-3322 or +1(240) 646-7054 to order.

“Phase diagrams are critical to materials selection and processing, but can be taken for granted until one encounters a system for which a diagram is not available. Thus, the availability and maintenance of phase diagram collections is critical for materials scientists and engineers.”

Jeffrey W. Ferguson, Auburn University

After the 2005 release of *Volume 14*, ACerS-NIST stopped publishing printed books. Instead, new evaluated diagrams and commentaries are published electronically in the online and CD-ROM products. Listed below are Phase Books still in print. *Volume 10* and *Volume 13* are no longer in print; however, all of the content is included in the electronic products.

VOLUME I: OXIDES AND SALTS • 1964 • 601 Pages

\$249 List • \$199 ACerS Member • Order Code: PH01 • ISBN: 0-916094-04-9

The topical CD-ROMs are valuable resources for those seeking a subset of Phase Equilibria Diagrams on:

- High-Tc Superconductors
- Solid Oxide Fuel Cells
- Phase Equilibria Diagrams, Vol. XIV
- Zirconium and Zirconia Systems
- Electronic Ceramics

PHASE DIAGRAMS FOR ELECTRONICS CERAMICS I • 2005 • CD-ROM

Robert S. Roth, Editor

This searchable CD-ROM contains the entire contents from the published book of the same title. The topical focus of this diagram collection is on systems of interest in the field of dielectric ceramics containing TiO_2 , Nb_2O_5 , and Ta_2O_5 . Such systems are important in the manufacture of ceramic components for applications including capacitors, transducers, actuators, resonators, and filters. The volume contains 857 figures and approximately 1,100 diagrams.

CD-ROM: \$249 List • \$199 ACerS Member • Order Code: PH108 • ISBN: 1-57498-241-9

PHASE DIAGRAMS FOR HIGH-Tc SUPERCONDUCTORS • 2005 • CD-ROM

J.D. Whittler, T.A. Vanderah, R.S. Roth, and H.F. McMurdie, Editors

This searchable CD-ROM contains the entire contents from the published books, Phase Diagrams for High-Tc Superconductors I and II. This CD-ROM includes 836 evaluated diagrams, most of which have appeared in literature between 1991 and 1996. Diagrams pertinent to all the families of high-temperature superconductors are included.

CD-ROM: \$249 List • \$199 ACerS Member • Order Code: PH106 • ISBN: 1-57498-239-7

PHASE DIAGRAMS FOR ZIRCONIUM AND ZIRCONIA SYSTEMS • 2005 • CD-ROM

H.F. McMurdie and H.M. Ondik, Editors

This searchable CD-ROM contains the entire contents from the published book of the same title and contains both old and new material. This CD-ROM includes 1,060 evaluated diagrams that describe all available data for systems containing zirconium.

CD-ROM: \$249 List • \$199 ACerS Member • Order Code: PH107 • ISBN: 1-57498-240-0

PHASE DIAGRAMS FOR SOLID OXIDE FUEL CELLS • 2006 • CD-ROM

Michael D. Hill, Editor

Phase Diagrams for Solid Oxide Fuel Cells is a topical cross-cut through the entire Phase Equilibria Diagrams published database. This compilation of 1596 diagrams is designed to be a resource for materials scientists working in this active area of research. The diagrams were selected according to their relevance to existing solid oxide fuel cell (SOFC) systems or to systems receiving attention in the research literature.

CD-ROM: \$249 List • \$199 ACerS Member • Order Code: PH110 • ISBN: 1-57498-285-0

VOLUME XIV: OXIDES • 2005 • CD-ROM • 672 PAGES

R.S. Roth and T.A. Vanderah, Editors

Contains more than 1300 evaluated diagrams and more than 800 descriptive commentaries on oxide systems, primarily from literature published through 2004. This volume complements the earlier phase volumes on oxide systems.

CD-ROM: \$249 List • \$199 ACerS Member • Order Code: PH109 • ISBN: 1-57498-256-7
