Correction to the October/November issue of the ACerS Bulletin

“New silica dust regulations will require changes in workplaces,” p. 32.

A correction was made to a unit error in the original publication—the new exposure limits are measured in $\mu\text{g}/\text{m}^3$, not g/m^3 as was originally printed. In addition, all instances of silica in this article refer to respirable crystalline silica. The archived electronic version has the correction.
