Welcome to Electronic Materials and Applications 2017! Jointly programmed by the Electronics Division and Basic Science Division of The American Ceramic Society, EMA 2017 is the eighth in a series of annual international meetings focused on the fundamental science and applications of electroceramic materials, including dielectric, electronic, magnetic, optical, electromechanical, and electrochemical phenomena.

The 2017 meeting features symposia focused on optoelectronic, magnetoelectronic, and photonic ceramics; thermal energy conversion; multifunctional nanocomposites; superconductors; ion-conducting ceramics; and materials for millimeter wave applications. Other symposia emphasize broader themes covering processing, microstructure evolution, and integration; effects of surfaces and interfaces on processing, transport, and properties; mesoscale phenomena; and computational design of electronic materials.

In addition to the technical symposia, EMA 2017 includes several supplemental activities and events. For example, the poster and networking session (Wed, 5:30-7:30 p.m., Arctic/Atlantic) this year features a selection of invited interactive posters for an even more lively session. The Basic Science Division is sponsoring a tutorial on “Ceramic Microstructure Evolution: Fundamentals and Characterization Techniques” (Wed evening, 7:45-9:45 p.m., Coral A) that will include pizza. Our lunchtime sessions will have boxed lunches for the first 36 attendees each day and will feature the finalists for the best student presentation awards (Wed and Thurs 12:40- 1:50 p.m., Coral A). Cash prizes provided by our generous sponsors (3M and Radiant Technologies) will be announced for student poster and presentation award winners at the conference dinner and awards banquet (Thurs, 7:00-9:00 p.m., Arctic/Atlantic). The grand finale of the meeting will again be a light-hearted session entitled “Failure: the Greatest Teacher” (Fri, 5:15-6:15 p.m., Indian). All of these activities are included in the meeting registration, and everyone is strongly encouraged to attend!

The meeting also features plenary lectures by distinguished scientists Sossina Haile from Northwestern University and Neil Alford from Imperial College London. The technical program, which includes invited lectures, contributed papers, and poster presentations, will provide ample opportunity for the exchange of information and ideas on the latest developments in the theory, experimental investigation and applications of electroceramic materials. The participants represent an international mix of industrial, university, and federal laboratory researchers, engineers, technologists and leaders.

We are pleased to build on the previous successes of this conference series in providing a distinctive forum to address emerging needs, opportunities and key challenges in the field of electronic materials and applications. We anticipate that this year’s meeting will continue to highlight the most recent scientific advances and technological innovations in the field, and to facilitate the interactions and collaborations that will help to shape its future.

The Electronics Division, Basic Science Division, symposium organizers, and staff from The American Ceramic Society thank you for joining us for EMA 2017. We hope you have a rewarding and beneficial meeting experience and very much look forward to your continued participation in future EMA meetings.

P.S. Please be reminded that **no** photography, audio recording, or videotaping of presenters in oral sessions is permitted. See policy on pg iv.

Sossina Haile, Walter P. Murphy professor of materials science and engineering, Northwestern University

Title: *Thermochemistry of redox active oxides and its relevance to solar fuel generation*

Biography: Sossina M. Haile is the Walter P. Murphy professor of materials science and engineering at Northwestern University, a position she assumed in 2015 after serving 18 years on the faculty at the California Institute of Technology. She earned her Ph.D. in materials science and engineering from the Massachusetts Institute of Technology in 1992. Haile's research broadly encompasses solid state ionic materials and devices, with particular focus on energy technologies. She has established a new class of fuel cells based on solid acid electrolytes and demonstrated record power densities for solid oxide fuel cells. Her more recent work on water dissociation for solar-fuel generation by thermochemical processes has created new avenues for harnessing sunlight to meet rising energy demands. She has published more than 150 articles and holds more than 15 patents on these and other topics. In 2008, Haile received an American Competitiveness and Innovation (ACI) fellowship from the National Science Foundation in recognition of "her timely and transformative research in the energy field and her dedication to inclusive mentoring, education and outreach across many levels."

Neil McN. Alford, MBE, FREng., professor of physical electronics and thin film materials, Vice-Dean (research) faculty of engineering, Imperial College London

Title: *From ultra-high Q dielectrics to the room temperature maser*

Biography: Professor Alford works in the field of materials engineering and has established an international reputation for his achievements in development of high strength cements, viscous polymer processing of ceramics, development of superconducting thick films, and latterly for the development of ultra low dielectric loss microwave dielectrics and ferroelectric thin films for communications.

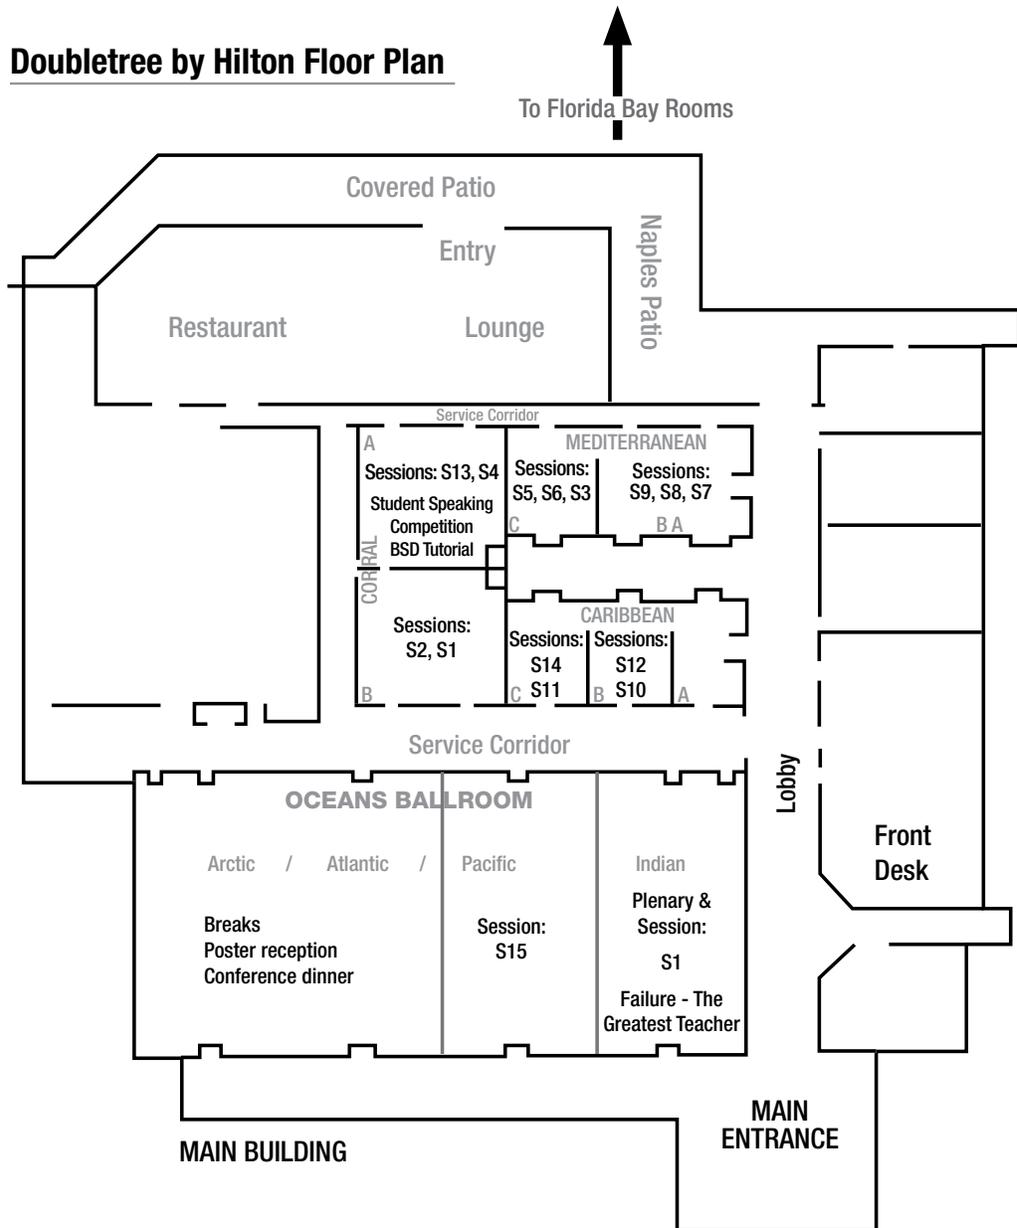

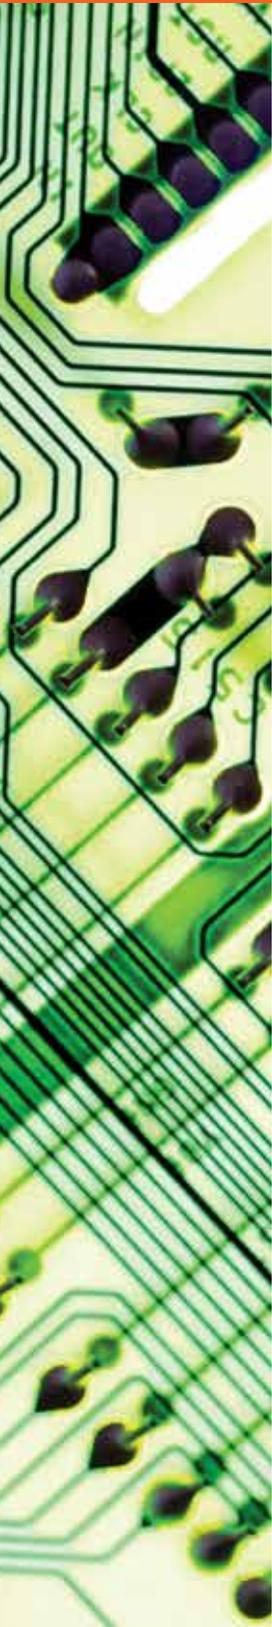

Recent work is targeted at microwave dielectric materials and successes have been the development of ultra low loss alumina resonators and an understanding of the defect chemistry of TiO_2 which has allowed the production of very high Q and high dielectric constant materials. Current activity is in the area of functional thin films for plasmonics and energy materials. His recent work has led to the development of a room temperature, earth's field MASER which was published in *Nature*.

He is a fellow of the Royal Academy of Engineering, the Institute of Physics, the Institute of Materials Minerals and Mining, The American Ceramic Society, and a fellow of the Institution of Engineering and Technology. He is an associate editor for the *Journal of the American Ceramic Society*. In 2012, he was awarded the MBE for services to engineering. He has over 250 journal publications and is the author of 21 patents. He sits on the U.K. government's advanced materials leadership council.

Best Student Talk Award Finalist Presentations

In recognition of their outstanding contributions to our field, each year the ACerS Electronics Division presents awards to the top three presentations and top three posters presented by students at EMA. While all of the student posters are judged during the poster session as part of this competition, logistical restraints dictate that only a subset of the oral presentations be fully judged. Thus, the Awards Committee of the ACerS Electronics Division pores over all submitted student abstracts and selects 8 finalists for the best presentation awards. These finalists are then given the opportunity to speak in the special lunchtime sessions to compete for this award in addition to or in place of speaking in the regular symposium to which they submitted their abstract. Only those students who speak during the lunchtime sessions are eligible for the awards. Please join us over lunch on Wednesday and Thursday to celebrate these students and their work.

Boxed lunches for the first 36 attendees each day are provided.

Experience the Next Generation of Material Science Catalogs

As one of the world's first and largest manufacturers and distributors of nanoparticles & nanotubes, American Elements' re-launch of its 20 year old Catalog is worth noting. In it you will find essentially every nanoscale metal & chemical that nature and current technology allow. In fact quite a few materials have no known application and have yet to be fully explored.

But that's the whole idea!

American Elements opens up a world of possibilities so you can **Now Invent!**
